TERMS OF SALE

1. **Prices:** The prices are quoted in English currency for delivery f. o. b. Hamburg, sea-proof packing included. For any special packing required the extra costs will be charged. All our Shades, Bowls, Unites etc. will be supplied without bulbs or sockets unless specially mentioned.
2. **Arbitrage:** In the event of any differences arising between our foreign customers and ourselves the matter will be referred to the law-court of Dresden, to the verdict of which both parties will have to submit. All payments are to be directed to Dresden.
3. **Delivery:** The goods ordered are invariably sent off at the risk and account of our clients, and no responsibility for breakage will be admitted unless insurance against breakage be specially prescribed on order sheet.
4. **Terms of delivery:** The terms of delivery stated are but approximative though, of course, we do our best to stick to same. All orders are subject to force majeure, such as strike, lock-outs, deficiency of material etc.
5. **Packing:** To eliminate breakage and to economise freight and duty we have adopted patented boxes for all our decorated glasses affording a tidy store by doing away with the tiresome straw and woodshavings, whereas the articles shown on pages No. 27—37 are packed as usual in either straw or woodshavings.
The items on pages 17—37 will be but supplied in original-boxes of 4 or 6 pieces each, and we reserve ourselves the privilege to either increase or modify the quantity.

It is particularly for the sake of our customers we give these boxes the preference, anxious ourselves they should be spared the trouble arising by breakage.

6. **Execution:** Glasses and fittings will be supplied according to our catalogue. Still, we claim the right to substitute the items not in stock by similar ones of same value.
7. **Terms of payment:** In opening new accounts and in case of payment upon surrender of B/L it is respectfully requested that two bank-references accompany the order. For payment by letter of credit opened in our favour at a bank in Hamburg we accord 3 % cash-discount.
8. **Declaration:** In order to correctly make up the docket and the bill of lading our clients are respectfully asked to furnish us with all necessary details. We cannot be made liable for fines arising by not having given us the required instructions.
9. **Letter-patent:** All novelties described in this catalogue are our property and patented for our firm. We must warn any one to imitate same, this would-be prosecuted by law.
10. **Claims:** Claims are only considered when approached to us within 10 days after receipt of goods. Shortages and damages should be reported to the Insurance Company and the goods should be examined by the respective commissioner for average.
11. **Sockets:** It is respectfully requested to mention on each orderform whether Edison- or Swan-fitting be required.
This catalogue cancels all previous editions.

L I G H T I N G G L A S S E S F O R E L E C T R I C L I G H T

We have at any time made it a principle to adopt the latest innovations for the manufacture of our Lighting Glasses, and by publishing our latest catalogue hope to prove our having succeeded in bringing out types which perfectly answer the demand for modern decoration and shape actually prevailing. We particularly wish to emphasise that true to our custom we are producing glasses of but first-rate quality, which must on no account be put on the same level with inferior makes. — We are happy to say our Lighting Glasses enjoy universal popularity, and by the great demand set in for our brands it may best be judged that they have reached the coveted stage of perfection, and that we have scored the goal in supplying our clients highest quality. — Our Lighting Glasses are the outcome of the up-to-date science and technic, and by virtue of their artistic execution and their tasteful shapes represent high-grade workmanship in every regard. The paintings and ornaments being burned-in we fully warrant for their longevity and the permanency of their colours.

Diaphan-Glass: This name signifies a glass of singular superiority distinguished by a charm of its own particularly effective even at day-time. It not only yields a perfect diffusion of light, but also reflects the colours in a soft yet striking manner. Especially the decorations are shown off to perfection.

SKOTOPHAN

REPORT

Under the name of „SKOTOPHAN“ has been put a new kind of glass for illuminative purposes upon the market which, in various respects, is far superior to the glass hitherto used for lighting purposes. „SKOTOPHAN“ glass consists of three layers of glass, viz. two layers of crystal glass and one opal reflex layer. Already outwardly it distinguishes itself from all other glasses, or from glass rendered satined by any method whatsoever, by its peculiar waxlike lustre; besides that, the surface of SKOTOPHAN is smooth in contrast to the rougher surface of glass made satined by the usual, or by mechanical, means. — For the practical employment of SKOTOPHAN glass that is a very important advantage. On matt glass dust and dirt notoriously settles so firmly already in a short time that it can no more be removed by simply washing it. A really perfect cleansing can only be attained by strong lyes or acids. SKOTOPHAN glass, on the other hand, can easily be cleaned by wiping it with a damp cloth, and even writing, done with a soft lead-pencil,

can readily be removed. — The lamp-globes and other lighting fixtures manufactured from SKOTOPHAN glass are extremely thin-walled, being only abt. 1,5 mm thick, whereas globes and bowls made of opal covered glass, or of opal glass, are from 3 to 4 mm thick and more. The thinness of the walls of SKOTOPHAN Globes and Bowls is of decisive importance from a practical point of view, since the absorption of light: O increases enormously with the thickness of the wall: d (being an exponential function of the thickness $O = ed$). — The photometric examination of a globe of 200 mm diameter showed a

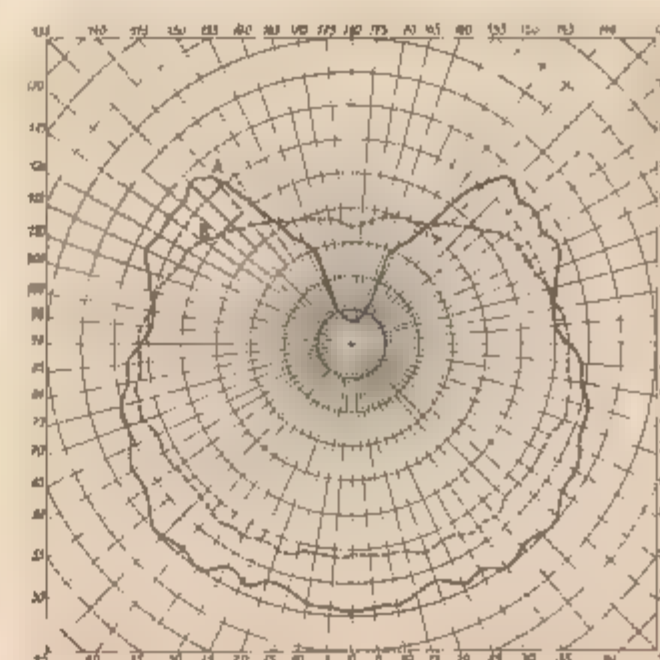

Permeability to light of 88.56%

with such perfect dispersion that even in the case of an overcharged incandescent wire of a Wolfram Projection Lamp there was absolutely no trace to be seen through the globe, whereas in the case of thicker-walled Opal-Globes covered glass globes with considerably less permeability to light the lighting system is usually distinctly visible. Glass for illuminative purposes, however, which does not completely conceal the lighting system of incandescent lamps must be rejected as not being free from dazzling. Owing to the excellent dispersion of SKOTOPHAN glass the lamp globes constructed from this material have the effect of a large-surfaced, dazzle-free source of light of which the illuminating power is practically equal over the entire surface, as appears from the photometric curves. — As another remarkable property of SKOTOPHAN glass it should be pointed out that it does not affect the colour of the source of light. Whereas most of the Opal and Opal covered glasses show a noticeably increased permeability to the red part of the spectrum, the permeability of SKOTOPHAN glass is almost the same for all divisions of the spectrum and only in the blue-green part of the spectrum is there an unimportant diminution of permeability. — Its excellent powers of dispersion combined with very slight absorption of light, together with the absence of any influence on the colour of the light, unite to make SKOTOPHAN eminently suitable for indoor as well as out-of-door illumination. On account of its delicate lustre it is also particularly well adapted for the manufacture of lighting fixtures which are also to have a decorative effect at day-time.

J. H. Lux

M I R R O R R E F L E C T O R S

We supply first-class Mirror Reflectors lined with genuine silver and accomplished with metallic cover, and we fully warrant for their longevity. Our fittings patented by letter are equipped with device for the exact adjustment of the luminous point due to which the bulbs can be adjusted to the mirror as minutely as to make same yield the most intense illumination of the spot. — In addition to the ordinary joint only adjustable to one side we also furnish a ball and socket joint, ensuring thereby an absolutely perfect lighting-up of the show-windows. — The canopy of the chains in order to facilitate fitting and effective fixture to the ceiling can easily be shifted. — The main types have been tested by the Electro-technical Institute of the Technical College of Dresden and the results achieved thereby have been termed as strikingly eminent. — The vertical Mirror Reflectors have now been perfected to such a degree that by properly adjusting the luminous point their light will be fifteen-fold increased.
